

Manufacturers in every industry benefit from

Adron's wire EDM

Shouldn't you?

Courtesy: NASA

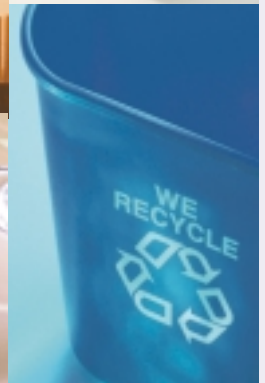

Adron's wire EDM is part of the manufacturing process for products in every industry. From production parts for aircraft guidance systems to molds for recycling bins, Adron has played a role in making hundreds of products.

Wire EDM is an efficient, economical choice in applications for OEMs in most industries, including: aerospace, defense, medical, nuclear, electronics, energy, automotive and consumer products. Designers can create parts for optimum function, without the restrictions of other metalworking processes.

We have 50 high speed wire EDMs with a capacity to handle workpieces up to 10,000 lbs. and more than 27½ inches thick.

Is there a component of your product that could be made better, faster, or more economically using Adron's production wire EDM?

Find out today.
