

Imagine what **wire EDM** can do for you then call **Adron** to make it possible

Above, a mold core and cavity.

At right, Adron wire EDMed ribs in this 22" stainless steel aerospace component.

38 inches thick

Adron was the first to apply wire EDM to ultra large workpieces weighing up to 10,000 LBS. Recently we tackled a wire EDM job cutting over 38 INCHES THICK.

Unusual Projects

We have a "no limits" philosophy of wire EDM; we tackle and succeed at jobs that other shops refuse to even look at. Our advanced technology combined with the expertise of our team give us the potential to wire EDM almost any workpiece, opening up a world of possibilities for you to improve design or function of your product.

Typical Jobs

Ordinary workpieces also benefit from Adron's advanced production wire EDM capabilities. Our service compares favorably with conventional machining in price and turnaround time for many jobs, yet offers many advantages over other production methods. Wire EDM unlocks the potential to design parts without the restrictions of other metalworking processes. Call us to find out if you should consider wire EDM.
